

The logo graphic features a cluster of colorful spheres (yellow, pink, blue, grey) arranged in a triangular pattern, with a colorful ribbon (yellow, pink, blue) flowing downwards from the base of the spheres.

COLORMASTERS

IN GOD WE TRUST

A NEW LEADER IN FLEXIBLE PACKAGING

Company Philosophy

To partner with Consumer Product Companies to provide superior packaging, to meet the demands of short lead times, with competitive pricing.

Leading

ColorMasters has become a leader in the packaging industry and is considered an innovative and competitive provider of flexible packaging. By using technology and equipment that are setting the pace in the industry, we are able to offer an impressive array of packaging options.

Our ability to print high-definition flexographic images using the new **MASTER Tune** printing process allows us to reach rotogravure printing standards on any package. This being one of many reasons that ColorMasters is considered an industry leader.

The visual perception of a package plays an important role in the consumer's choice. The package often serves as the first communication between the manufacturer and the consumer. Therefore, the packaging's appeal-or lack thereof-can determine whether the consumer selects that particular product or passes over it for one that has more appeal.

ColorMasters understands that our customers want to provide a package that is easy to use, easy to close, easy to store and easy to discard. In fact, we have multiple machines to create an extensive assortment of configurations to meet any customers demand for packaging. We also supply many different industries with packaging and are the choice supplier when it comes to snack foods, fresh and frozen foods, bakery items, pantry staples, household goods, lawn care products and pet foods, as well as hunting and fishing supplies.

Food packaging is a very important component of the overall business at ColorMasters. All product manufactured at our facility are produced in a food safe environment which is third party audited by AIB International. We have achieved superior ratings and strive to maintain a safe overall environment for the packaging we produce and for the employees who produce it.

Capabilities

Printing

Colormasters embraces new technology and by using the new **MASTERTone** printing process, we are a leader in flexographic printing. This new process allows us to duplicate rotogravure line screens and densities. The combination of high end equipment, pre-media, plates, and printing inks give us the ability for quick change and high production speeds, and first rate quality.

Lamination

Our solvent-less adhesive laminators are capable of laminating web widths up to 60 inches and multiple flexible structures such as Polyethylene, Polyester, Polypropylene, Nylon and EVOH films.

Inno-Lok

If you are currently buying roll-stock and would like to add a re-closeable feature, ColorMasters can help. We have the capability, in house, to apply Inno-Lok a re-closeable feature for form, fill, and seal materials. This feature can be applied to webs up to 40" and used with a number of different applications

Converting

We have many different bag machines for multiple bag configuration and product lines. Some of the type bags we are capable of producing are side gussets, bottom gussets, zip-lock, handles, headers, vents, and wickets.

Pouches

The Totani pouch machines allow us to produce quality pouches in many configurations from stand-up re-closeable pouches to three side seal lay flat pouches.

Slitting

We have multiple Slitter/Rewinders with the capability of slitting speeds of 2000fpm and producing roll-stock for many applications such as bakery, rice, pet food, and snack food industries.

Laser Score

AcuTear[®] - Laser scoring for easy open / easy tear packaging. Laser scoring allows for controlled tear propagation while maintaining package strength and barrier properties. Laser contour scoring enhances access to closure technology.

AcuBreathe[®] - Laser micro-perforating solutions for easy-breathe, easy-fill and easy-pack packaging. From gas transmission to moisture release, AcuBreathe[®] laser micro-perforating can be tailored to fit a range of material types and thicknesses. Preco patented laser beam compression software will allow micro-perforations at rates 3 times faster than industry standards.

One Company, One Source

The ColorMasters team and our flexible production schedule allow customers to enjoy swift order fulfillment. Whether it is a new package design or existing item for re-order, our production process to complete these orders are normally completed within a matter of weeks. Our team is committed to delivering a quality product, with exceptional service, on-time everytime. ColorMasters does not consider itself just a supplier of flexible packaging but a partner to the customer it serves.

Production

3-4 Week Turnaround

Environment

Colormasters strives to preserve and protect God's green Earth. Colormasters was one of the first companies in our area to partner with the local utility provider for green power. By using Solar, Wind, and Biomass renewable resources, we look to be an environmentally responsible company. Colormasters also looks inward to constantly reuse, reduce, and recycle waste streams. We also work with manufacturers in evaluating their packaging requirements in an effort to limit impact upon the environment. Doing so has the added benefit of potentially reducing costs for customers.
